

# REVOLUTIONARY LASER PRINTER FILM

GCC's new Laser Printer Film for the Graphic Arts market is an absolute must for those users who demand the highest level of black toner density! The film is two-sided mat, with an anti-halo coated surface, and delivers the blackest of blacks when it comes to toner density. Add to that a coating of GCC's incredible toner spray and you will find black density in most cases is almost double that of the original laser result!

GCC Technologies have been manufacturing high-speed high quality laser printers for the graphics art market for 15 years and can now offer Laser Film in both A4 and A3 size. Our film is MY90 or MY115 in thickness, and coated on a very stable thermal base. Market tests have found the frosty-white colour of our film compared to the yellowish colour

of other films is more preferred by Australian printers.

Manufactured in Italy, incorporating a special thermal stable process, GCC's Film produces less curl and wave effect than competitive products. Start enjoying blacker blacks now! Move up to GCC's New A4 & A3 Laser Printer Film.

# GCC TONER DENSITY SPRAY

If toner density and opacity are important to you, GCC's Toner Density Spray is a must! Specially formulated to achieve maximum opacity and quality, with hassle free preparation, you'll save time and energy when it comes to your computer-to-film imaging needs.

Simply spray your image gently, one layer at a time, until the required density is achieved. The result is sharper, denser images that deliver fantastic reproduction. The results are staggering. Truly superior!

Add to that GCC's range of laser printers and NEW GCC Laser Printer Film, you'll find yourself with high quality artwork for both screen and offset printing applications.
